Bridge Report
June 2025

Woodview Road Bridge- the Township Public Works Department has completed work on this project, and the bridge is open as of 6/3/25. Final paving will occur as part of the townships annual paving program later in the year.

Glen Willow Road Bridge- the Township has received approval from the National Park Service in late April, and continue to await for a final signoff from the Army Corp of Engineers. Such signoff should be received in the immediate future as it is primarily predicated on the National Park Service approval. These approvals are required by federal law due to the White Clay Creek being designated by Congress as "Wild & Scenic". We are currently working with PECO and Verizon on required utility relocations. Additionally Regan Engineering is working on final easement plans.

Hilton Road Bridge- the Township has received approval from the National Park Service in late April, and continue to await for a final signoff from the Army Corp of Engineers. Such signoff should be received in the immediate future as it is primarily predicated on the National Park Service approval. These approvals are required by federal law due to the White Clay Creek being designated by Congress as "Wild & Scenic". Regan Engineering is working on final easement plans.

Chambers Road Bridge- The survey work has been completed for the Chambers Road Bridge and Ragan Engineering is currently working on the Hydrology and hydraulic Design. We have met with the Army Corp of Engineers and the National Park Service on site, and have been granted verbal approval of the concept to relocate the bridge to the south to allow construction to occur while maintaining the current signal access crossing.

Paschal Mill Road- We are currently working with Regan Engineering and ConTech on a final design for this project..
